/Richard Hjerpe/ Supervisory Patent Examiner, Art Unit 2629			

On pages 12-14 of Remark, Applicant's stated that Claim 1 now calls for combining, within a single frame, a higher-luminance pixel driven at a higher luminance than luminance data of an image to be displayed, and a lower-luminance pixel driven at a lower luminance than the luminance data. Support for this feature can be found in FIG. 1B and the related description, which shows a higher luminance pixel la and a plurality of lower luminance pixels lb surrounding the higher luminance pixel. FIGs. 7A and 7B including the related description further provide support for this feature. However, fig. 1B and the related description do not confirm combining, within a single frame, a higher-luminance pixel driven at a higher luminance than luminance data of an image to be displayed, and a lower-luminance pixel driven at a lower luminance than the luminance data and fig. 7 shows four frames.

On pages 16, last paragraph of Remark, Applicant's stated that in the method of independent Claim 1, the area ratio is based on the areas of the higher luminance pixel and the lower luminance pixel (where the higher luminance pixel is a pixel that is driven at a higher luminance than the luminance data of aimage to be displayed, and the lower luminance pixel is a pixel driven at a lower luminance than the luminance data). Thus, in the method of Claim 1, the ratio is based on the areas of pixels that are in the on-state, but are driven at either a higher voltage or lower voltage than the voltages of the original, unprocessed image. This is a distinction over the ratio of the Kimura reference, which is based on total pixel area to the area of only those in the on state. However, in response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., unprocessed image) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See In re Van Geuns, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).
